使用pexs封装的Request组件时，发现将formData按正常post请求放在data中无法实现表单上传，在查看Request源码后发现该组件存在请求和响应的拦截器勾子，需要在req中设置formData: true才能开启表单上传逻辑，此时req.body = req.data, 请求头中Content-Type: multipart/form-data, 可以正常传送File对象读取成的二进制流文件。

```
// 文件上传处理
@action.bound handleUpload = async () => {
  if (!this.UploadFile) {
    Notification.error('请选择一个文件! ');
    return;
  }
  const formdata = new window.FormData();
  formdata.append('input', this.UploadFile);
  formdata.append('method', this.UploadModel.type);
  formdata.append('profile', this.UploadModel.profile);
  formdata.append('fileName', this.UploadModel.name);
  Request.post('/api/development/upload/v1/load', {
    data: formdata,
    formData: true,
  });
};
```
